

^{IQ}RailQA – Rail Network Knowledge for Everyone

Every single component of the rail network helps ensure that trains keep running. On schedule. And generate revenue. That is why it is so important to have reliable documentation of the rail network. Numerous external reporting requirements apply to rail system decision-makers. Rail network documentation serves as a basis for many such decisions as well as for effective public communication. This is where ^{IQ}RailQA comes into play, offering the most in reliability. Errors and omissions in documentation pose a risk for rail operations and quality of service as well as the company's standing.

^{IQ}RailQA allows you to take rail network documentation to a new quality level. Aside from ongoing rail operations, this improves the quality of business and financial reporting.

The benefits at a glance:

- ≡ SINGLE rail network documentation for ALL areas
- ≡ Current and accurate database for operations
- ≡ Proven quality base for meeting reporting requirements
- ≡ Future-proof solution for an integrated rail system
- ≡ Precise means of valuation in financial reporting

Cuts operating costs

^{IQ}RailQA means centralised expertise

The rail network relates to ALL areas and processes in the company. Yet up to now the various technical and operational railway disciplines have usually documented the network differently. Often such outcome is only partially suitable to other departments and their tasks. The solution:

^{IQ}RailQA makes knowledge of the rail network available to everyone in the company.

Optimum lifecycle management

Reliable data on the rail network is vital to maintain a complete picture. They support efficient planning of operations and resource use (staff hours, axle loads and many other factors) while minimising transaction costs.

Strategic benefits

Source of key indicators and security

With its precise rail network documentation, ^{IQ}RailQA opens up new options: in the way of monitoring, reporting to owners and stakeholders, internal reporting on data quality and crisis management.

^{IQ}RailQA is the fitness centre of the future

Developments at international level are driving and demanding interoperability of rail systems. Documentation to the quality level supported by ^{IQ}RailQA will soon be a standard requirement in the EU (cf. TSIs and RINF).

In brief

Faulty documentation of the rail network contributes to vulnerability in all areas of the railway company. ^{IQ}RailQA is a solution ensuring reliable, coordinated and future-proof documentation.

You can trust the solid data basis in decision-making processes. Benefit from secure rail operations, budgeting and reporting!

Our company: IQSOFT

Since 1999 IQSOFT has been developing innovative IT solutions that put our clients ahead of the competition. As its main focus, the company is dedicated to the digital transformation of enterprises responsible for infrastructure.
